myndshft™

Simpler. Faster. For Anyone.

CognitiveBus® Claims Management Suite

WHO WE ARE

Myndshft was founded in 2015 to make modern technologies – artificial intelligence, blockchain, process automation, big data, and analytics – available to disrupt the fragmented and complex "administrative plumbing" that healthcare works under today.

Our early focus has been to build an intelligent, cloud-native platform which brings these powerful technologies together and make it all available in a single trust-worthy platform that can meet the unique needs of healthcare. In our journey we focused on three design principles – Simpler. Faster. For Anyone.

The result is CognitiveBus®, our AI + Blockchain platform that democratizes these advanced technologies and makes them available for every healthcare organization regardless of size. The platform is now hard at work in leading healthcare organizations and we're building Myndshft applications on top of CognitiveBus® to transform every aspect of healthcare administration.

MYNDSHFT CAPABILITIES FOR HEALTHCARE

We believe that healthcare should focus on the consumer and not on complex, labor intensive, and costly administrative processes. Our goal is to streamline and simplify the business of healthcare through the pragmatic deployment of advanced technologies.

Consumer Engagement & Access

- Identity Management
- Eligibiligy and Enrollment
- Customer Service
- Benefits Management

Health & Care Management

- Population Health & Wellness
- Utilization Management
- Care Coordination
- Case Management

Business Operations

- Network Management
- Provider Credentialing
- Contract Management
- Claims and Revenue Cycle Management

Intelligence

- Business Intelligence
- Quality & Compliance
- Fraud, Waste, & Abuse
- Patient Analytics
- Reporting

Intelligent Automation + Cognitive Computing + Blockchain

WHO WE ARE WORKING WITH

Myndshft works with healthcare organizations to modernize their processes and technology to enhance the patient experience.

Providers/Pharmacies/Laboratories

We help health systems,hospitals, practices physician groups, clinics, and telemedicine organizations to optimize revenue cycles, reduce costs, and provide quality care by streamlining and simplifying revenue cycle processes

Health IT

We work with health IT companies to modernize platforms and systems without the need to rip and replace legacy systems or make large capital investments

Payers/Benefits Management

We help payers to reduce administrative inefficiencies, collaborate with providers and improve member experience by adopting new technologies in claims management

Outsourcers

Gone are the days where simply offering the same services at a lower price is adequate. Myndshft helps outsourcers to provide the highest level of automation and insights in their offerings

MYNDSHFT'S CB.CLAIMS™

Myndshft's CognitiveBus® Claims Management Suite (CB.Claims™) is our end-to-end claims management solution which streamlines and accelerates the claims process leveraging artificial intelligence and distributed ledger technologies.

REAL-TIME BENEFITS VERIFICATION	Instantly determine patient out-of-pocket costs by comparing cash prices with real-time, member-specific eligibility, deductible, coinsurance, and copayment information.
AUTOMATE AND ELECTRONICALLY SUBMIT AND EXECUTE TRANSACTION REQUESTS	Automate the collection of required information and electronically submit a PA request and claim to one of several hundred payer connections.
REAL-TIME STATUS MONITORING	Continuously monitor PA and claims status and get alerts of status changes in real-time.
IN-THE-MOMENT INSIGHTS	Blend data from multiple sources and real-time streaming data to predict financial risks, likelihood of approval or denial, and identify pre-emptive actions to avoid errors and denials.
EASY AND FLEXIBLE INTEGRATION	Interoperability is core to the CognitiveBus® platform to quickly and easily integrate with third-party data sources, electronic medical records, health information systems, and other legacy systems.

POWERED BY COGNITIVEBUS®

CognitiveBus® is a secure, scalable, compliant platform and built to support enterprise level scale. Purpose built for healthcare, CognitiveBus® includes MYND.AI, the leading Machine Learning/Artificial Intelligence platform and MYND.Chain, our healthcare blockchain technology, that ensures flexibility, security, and speed in automating the end-to-end intercompany revenue cycle and prior authorization processes.

CB.CLAIMS™ ARCHITECTURE

Automation of end-to-end revenue cycle tasks on a single platform with embedded AI. M:IA™ executes tasks in the background, while supplying real-time data to CognitiveBus® for machine learning models focused on reducing denials.
